

FUEL CELLS IN THE DISTRICT

- LEED-Certified

Mark Twain House and Museum: Hartford's beloved local history museum generates some of its electricity with a stationary fuel cell. It is the first museum in the nation, and the first building in Connecticut, to attain LEED (Leadership in Energy and Environmental Design) Certification. LEED Certification distinguishes building projects that have demonstrated a commitment to clean energy and that emphasize new strategies for energy efficiency.

- Hartford Fuel

Cell Bus: In April 2007, the city of Hartford unveiled its first fuel cell bus, the only bus of its kind to operate east of Texas. The bus runs completely on fuel cells designed by UTC and uses a hydrogen refueling station located at UTC Power's headquarters in South Windsor. The bus is owned by CTTRANSIT, Connecticut's state-owned bus system, and runs on the Hartford Star Shuttle route.
